**DETAILED ACTION**

***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-15, 17, 17, 19, drawn to device for storing, mixing and dispensing components having side by side arrangement and *a closure*.

Group II, claim 16, drawn to device for storing, mixing and dispensing components having side by side arrangement *a valve* and at least another container and having a common closure and two outlets with a common coupling.

Group III, claim 20, drawn to a mixing arrangement for a container having *dispensing means* and a mixing rod, and mixing member which moves back and forth.

Group IV, claim(s) 21-24, drawn to a *valve assembly* for a two container dispensing device the assembly having a three-way valve and rotary ring groove and inlets and outlets .

Group V, claim(s) 25, drawn to a method of conditioning and dispensing a mixture utilizing a device having side by side arrangement *a closure*.

Group VI, claim(s) 26, drawn to a method of conditioning and dispensing a mixture utilizing a device having side by side *arrangement a valve* and at least another container and having a common closure and two outlets with a common coupling.

Group VII, claim(s) 27, drawn to a method of conditioning and dispensing a mixture utilizing a device having side by side arrangement having a *three way valve*, rotary ring groove, and inlet and outlets.

Art Unit: 1797

2. The inventions listed as Groups I through VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The common feature of the groups are the use of a closure or valve structure in the context for dispensing. This common feature is not an advancement over the art as evidenced by the US patent 7,080,936 valve structure 108, 116, 120 in a side by side container for dispensing. This common feature is found as not being an inventive concept over the art. Thus any alleged inventive features within each of the groups are found as not being in common to one another. The groups have been found as being not directed to the same single general inventive concept.

3. The restriction requirement is written out in order to provide foreign applicants a period for timely review and response to the issues above.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
